

RESEARCH STATEMENT

My research interests are in the semantics of programming languages, especially probabilistic programming languages, as well as causal inference, type systems, and formal verification. I am interested in how formal semantics can make the behavior of programs and causal models precise, how type systems can express and enforce invariants, and how verification can establish that implementations satisfy their specifications. More broadly, I want to develop rigorous foundations for reasoning about reliable computational systems.

EDUCATION

Ashoka University

Bachelor of Science (Honours) in Computer Science

Major CGPA: 3.74/4

Sonipat, Haryana

Aug 2018 - Apr 2022

RELEVANT COURSEWORK

Discrete Mathematics; Algorithm Design and Analysis; Linear Algebra; Calculus; Abstract Algebra; Probability Theory; Programming Language Design and Implementation; Operating Systems; Computer Networks; Computer Security and Privacy.

EMPLOYMENT

Ashoka University

Research Associate · Programming Languages

- Studying semantics of programming languages, computational effects, and categorical approaches to programming-language foundations.

Sonipat, Haryana

Jun 2026 - Present

Firebolt

Software Engineer · Self-hosted Platform

- Joined the founding engineering team building Firebolt's first self-hosted platform for isolated, air-gapped enterprise deployments, including feature flags and Temporal workflow orchestration.

Bangalore, India

Nov 2025 - Mar 2026

Google

Software Engineer · Google Cloud, Distributed Cloud Team

- Built software for Google Distributed Cloud, bringing Google Cloud services into air-gapped, sovereign, and regulated environments through distributed systems that operated without public-network dependencies.
- Designed a Harbor-based artifact registry for a 40kg portable data center, adding Kubernetes self-healing, node-local fallback mirrors, and image signature verification to support offline bootstrap and operation.
- Built APIs and observability tooling for Prometheus/Grafana monitoring, covering system health, storage, image-pull latency, error rates, alerting, and dashboards for internal teams and deployment operators.
- Mentored junior engineers and hosted a summer intern who later joined full time.

Bangalore, India

Mar 2024 - Sept 2025

Google

Strategic Cloud Engineer · Google Cloud

Bangalore, India

Jul 2022 - Mar 2024

- Helped enterprises become cloud-native on Google Cloud, combining technical consulting, hands-on implementation, and architecture guidance across cloud infrastructure projects.
- Researched and prototyped Data Insights, an LLM-powered natural-language layer for tabular data discovery, testing generated questions, SQL guardrails, accuracy, and latency for cold-start exploration of unfamiliar datasets; the capability later became part of a Google Cloud data management product.
- Built reusable cloud and data tooling, including Terraform modules for Kubernetes clusters and VPCs alongside open-source Dataproc templates for Spark/Hadoop ETL.

TEACHING

Ashoka University

Teaching Fellow · [Data Structures and Algorithms \(CS-2212-1\)](#)

Sonipat, Haryana

Monsoon 2026

- Teaching with [Prof. Aalok Thakkar](#) in the Monsoon 2026 offering of the course.

AshokaX

Teaching Assistant · Machine Learning

Online

Apr 2022 - Jun 2022

- Assisted [Prof. Debayan Gupta](#) in teaching machine learning to high school students.

Ashoka University

Teaching Assistant · Computer Organization and Systems

Sonipat, Haryana

Monsoon 2021

- Assisted [Prof. Manu Awasthi](#) with Computer Organization and Systems in Ashoka's Computer Science department.

ACTIVITIES

- Participant, [Indian School on Logic and its Applications \(ISLA 2026\)](#), Krea University · Jun 25–30, 2026. Coursework: Programs and Proofs; Computability Theory.
- Participant, [Formal Methods Update Meeting 2026](#), Krea University · Jul 2–3, 2026.
